---

### All Nobi lamps:

- seamlessly fit into **any interior**
- offer **trouble-free installation** without the need for extra wiring
- provide **two-way audio capabilities** along with Bluetooth and WiFi connectivity to enable connection with peripheral devices, the outside world, and communication between the lamps

## Partner products & integrations

Pair your favorite Nobi lamp with these complementary add-ons

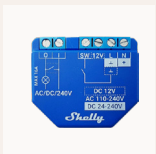

### Wireless Push Button Interface

Battery-powered module that connects to 1 button/switch, installable behind an existing light switch.

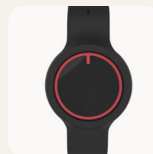

### Wireless Push Button Interface (Wall-mounted)

Wall-mounted button that can operate lighting, activate the panic feature, or initiate the snooze function.

### Wired Switching Interface

Mains-powered module installable behind an existing switch, or an existing light, to allow it to turn on or off together with your Nobi smart lamps.

### Wearable Panic Button

A portable, multi-use, and waterproof panic button with a chargeable battery. Wearable as both a pendant and wristband.

---

## Integrate with your existing systems? Of course!

Should you give up your current nurse call system? Not at all. **The power of Nobi lies in its integration capabilities with existing systems and smart devices.** For example, your staff can be called through your existing call system whenever Nobi detects a fall.

Connecting smart devices such as blood pressure monitors and scales will ensure automatic, more efficient patient data administration. Your healthcare staff will save valuable time that they can spend on even more tailored preventive care.

### Are you looking for a specific integration?

Get in touch, and we will assist you.

**The connection with the Nobi lamps expands our current call system with new, life-saving functionalities.**
